Spatial Vision

Melbourne, Victoria

Dear Spatial Vision,

I have written this letter to convey my interest in working a part-time position at your firm as a designer while pursuing a masters degree at RMIT.

I am a graduate with academic honors from the International Faculty of Architecture Chulalongkorn University Thailand. I have over a year and a half of working experience in designing and coordinating projects for the top landscape firm in Thailand - TROP: Terrain + Openspace; an art designer and copywriter for a branding agency - Crimson and Indigo (thailand); a human resource administrator for the Thai Royal Navy; and a freelance designer with ArchiveTeam for 3D modeling, rendering, and animation.

The interactive designer position highly piqued my interest and passion for the creative production of visual design. I am enthusiastic to coordinate and lead ideas from local and international perspectives on visual content and innovative design directions. I believe this position will highlight my key strengths in design conceptualization, organized development and production, and my abilities to collaborate and communicate through a wide range of people with interdisciplinary perspectives on interactive design. I hope to support the team to success with my following values:

- **Interdisciplinary Approach to Design:** I have worked within fields adjacent to architectural design as well as with stakeholders from outside design fields. I have experience implementing the fields of linguistics, marketing, programming, law, and engineering into the design process.
- **Leadership and Communication:** I have experience leading projects in my employment for the development of company identities, web design, project proposals, and large scale commercial architectural landscape design coordination on an international level.
- **Drive for Perfection:** I strive for the best quality output and detail when working with designs and visualization. Furthermore, I aim to organize my work in a manner that is presentable and easily understood by both peers and clients.
- **Teamwork and Collaboration:** I value collaboration and mutual understanding in team settings above all else when working towards a goal. I have high expectations for both the growth and abilities of my team alongside me.

During my studies to acquire a bachelor's degree I have built the foundation of understanding and skills for architectural design and graphic visualization. During my employment, in both a multi-media branding agency and a landscape architectural firm, I have worked with countless businesses, brands, and international clients to make their ideas become a reality. Now, during my masters study in Melbourne, I hope to join your team as a part timer to further broaden my perspectives and skill set towards educational success and career mindset growth. I believe by working at Spatial Vision, I will be able to utilize the skills and experience I have accumulated in Thailand while discovering new opportunities for cultural exchange while I pursue my masters in Melbourne and support the company's success.

For additional information, please reach me anytime via the contacts provided.

Sincerely, Navapol Neil Montong
